MARKET ANALYSIS

H_2 PRICING TECHNICAL REPORT

S&P / Platts Hydrogen Standard Pricing Breakdown Version 2.0 · February 2026 Non-Confidential

EXECUTIVE SUMMARY

Tobe Energy manufactures membrane-free hydrogen electrolyzers with **>92% system efficiency**, targeting **$1.81/kg LCOH**, with commercial deployment scheduled for **Q4 2026**.

PLATTS LOW-CARBON HYDROGEN PRICING

Renewable-derived gaseous hydrogen indicative value at $7.05/kg delivered within 50 miles (compressed, ~200 bar tube trailer), utilizing low-cost renewable electricity and sustainable water resources in Oklahoma. Price reflects a **30% profit margin** at full commercial scale (~900,000 kg/year). At-the-gate offer, excluding delivery and ongoing R&D investments, is approximately **$4.36/kg**.

Pricing Structure

- **Delivered (within 50 miles, gaseous hydrogen at ~200 bar): $7.05/kg** (30% profit margin)
- **At-the-gate cost (excluding delivery, retaining 30% margin): $6.15/kg**
- **At-the-gate cost without R&D expenditures (30% margin): $4.36/kg**

Product Specifications

- **Manufacturing:** Fully American-made, vertically integrated manufacturing — from power electronics to electrolysis stacks, all in-house
- **Location:** Oklahoma, USA
- **Production Method:** Electrolysis (**>92% system efficiency**), renewable-derived low-carbon hydrogen
- **Delivery Method:** Gaseous hydrogen via tube trailers (~200 bar), delivered up to 50 miles
- **Price Basis:** Indicative delivered cost at scale, year-three facility maturity, 30% margin
- **Long-term Outlook:** Pricing expected to trend lower with further scale-up and improved operational efficiencies beyond year three

- **Sustainability Credentials:** Renewable energy sources, minimal environmental footprint, low-carbon hydrogen designation in alignment with Platts methodology

COST BREAKDOWN ANALYSIS

Worst-Case Scenario Cost for Tobe Energy (Year 3)

© 2026 TOBE ENERGY INC.

ITEM	COST ($/KG)
Electricity (42 kWh/kg at $0.035/kWh)	**$1.47**
Compression & Purification (3.5 kWh/kg at $0.035/kWh)	$0.12
Transportation (50-mile delivery)	$0.90
RO Water (9 liters/kg at $0.005/liter)	$0.05
Direct OpEx (excluding CAPEX & labor)	$2.54
Annualized CAPEX & Personnel Costs (including R&D capex and personnel requirements)	$2.86
Total Breakeven Cost (Year 3)	**$5.40**
Indicative Selling Price (30% profit margin)	**$7.05**

COMPARATIVE HYDROGEN PRICING ANALYSIS

Methodology for Comparative Hydrogen-Price Benchmarking

To ground our cost claims in an objective market context, we began with the complete set of S&P Global Commodity Insights / Platts hydrogen price "heards," bids, and spot offers listed in the appendix. After de-duplicating repeated entries and standardizing the formatting (currency, units, and spelling), each price point was tagged along three axes:

- **Supply type** (grey SMR "Conventional," low-carbon, or renewable/green)
- **Delivery mode** (pick-up at plant gate, delivered by tube-trailer, dispensed at a public pump, or shipped by pipeline)
- **Subsidy status** (explicit mention of IRA 45V, LCFS, carbon credits, or other incentives)

With those tags in place, we applied the same commercial filters that govern Tobe Energy's own offering. We kept only prices that:

- Exclude any embedded subsidy
- Are quoted at the plant gate or for customer pick-up (no retail pump, no long-haul freight, no captive pipeline)
- Already include liquefaction or ≥200 bar compression so downstream users incur no extra compression cost
- For "Conventional" hydrogen, explicitly state fuel-cell-grade 99.999% purity if we want a perfect apples-to-apples comparator

© 2026 TOBE ENERGY INC.

Any quote that satisfied every filter became Tier 1 Conventional — the precise incumbent product we intend to undercut. Offers that passed the economic tests but lacked one or two metadata points (for example, the purity spec was implied rather than stated, or the listing carried no expiry date) were relegated to Tier 2 Conventional. A small handful of unsubsidized renewable or low-carbon quotes that met the same delivery criteria were grouped under Tier G Renewable. All other entries — pump prices in the high-$20s, pipeline tariffs quoted in dollars per million SCF, forward cost curves for 2035 mega-projects, and any figure built on IRA or LCFS credits — were excluded from the comparative analysis because they do not represent costs our customers would face at the point of purchase.

This disciplined triage yields a market snapshot that aligns cleanly with Tobe Energy's Oklahoma economics:

- Today's fully on-spec SMR hydrogen collected at the plant gate trades in the **$7–14/kg range**
- Broader but slightly less documented SMR quotes cluster around **$8–13/kg**
- Truly green, unsubsidized alternatives remain scarce and generally higher-priced, with the notable exception of Tobe Energy's own **$7.77/kg at-gate indication**

These tiers provide a transparent baseline against which our updated costs — **$6.24/kg at the gate** (dropping to **$4.45/kg** as R&D amortizes) and **$7.14/kg delivered within 50 miles** — can be compared. In short, the methodology ensures that every number we cite is a like-for-like match on purity, compression, delivery responsibility, and subsidy treatment, giving investors and customers a clear view of the discount our technology unlocks.

APPENDIX: HYDROGEN PRICING DATA FROM PLATTS

Verified Comparable Pricing (Filtered)

- **PLATTS CONVENTIONAL HYDROGEN:** Spot offer at **$7.20/kg**, liquid hydrogen, pickup only, expires May 16, up to 1 trailer/day, 99.999% minimum purity, grade SAE J2719 compliant, Location: Charleston,

Tennessee, Source: Plug Power

- **PLATTS CONVENTIONAL HYDROGEN:** Spot offer at **$7.20/kg**, liquid hydrogen, pickup only, expires May 16, up to 1 trailer/day, 99.999% minimum purity, grade SAE J2719 compliant, Location: Woodbine, Georgia, Source: Plug Power
- **PLATTS CONVENTIONAL HYDROGEN:** Spot offer at **$7.20/kg**, liquid hydrogen, pickup only, expires May 16, up to 1 trailer/day, 99.999% minimum purity, grade SAE J2719 compliant, Location: St. Gabriel, Louisiana, Source: Plug Power
- **PLATTS HYDROGEN:** Indicative value at **$12.28/kg**, SMR-derived hydrogen, spot basis, gaseous, below 5,000 kg/month, pickup at the plant, Southern California
- **PLATTS HYDROGEN:** Indicative value at **$8/kg**, SMR-derived hydrogen, spot basis, liquid, below 5,000 kg/month, pickup at the plant, Southern California
- **PLATTS HYDROGEN:** Indicative spot value at **$8.50–12/kg**, conventional SMR-based hydrogen, Southern California, at the facility gate
- **PLATTS HYDROGEN:** Indicative value at **$13/kg**, SMR-derived hydrogen, at-the gate, spot basis, liquid, below 5,000 kg/month, Southern California [Heard 3/28/2025]
- **PLATTS HYDROGEN:** Indicative value at **$9–11/kg**, SMR-derived hydrogen, at-the gate, spot basis, liquid, USGC [Heard 3/28/2025]
- **PLATTS HYDROGEN:** Indicative value at **$12/kg**, SMR-derived hydrogen, at-the gate, spot basis, gaseous, below 5,000 kg/month, Southern California
- **PLATTS HYDROGEN:** Indicative value at **$9/kg**, SMR-derived hydrogen, at-the gate, spot basis, liquid, USGC

Renewable/Low-Carbon Hydrogen Pricing

- **PLATTS RENEWABLE HYDROGEN:** Renewable-derived "green" gaseous hydrogen indicative value at **$7.77/kg** at-the-gate, utilizing renewable electricity, excluding IRA 45V tax credits, Oklahoma, full commercial scale (~900,000 kg/year), operational date Q4 2026, Source: Tobe Energy Corp.
- **PLATTS RENEWABLE HYDROGEN:** Renewable-derived "green" gaseous hydrogen indicative value at **$8.67/kg** delivered within 50 miles (compressed, ~200 bar tube trailer), utilizing renewable electricity, excluding IRA 45V tax credits, Oklahoma, full commercial scale (~900,000 kg/year), operational date Q4 2026, Source: Tobe Energy Corp.
- **PLATTS LOW-CARBON HYDROGEN:** Renewable derived "green" hydrogen indicated breakeven value **$12–$13/kg** in California, delivered hydrogen, transit sector
- **PLATTS LOW-CARBON HYDROGEN:** Renewable derived "green" hydrogen indicative bid at **$14–15/kg**, delivered hydrogen going into transit and trucking sector, gaseous or liquid, California hydrogen hub
- **PLATTS LOW-CARBON HYDROGEN:** Renewable derived "green" hydrogen indicative value at **$10/kg**, going into transit sector, starting in 2027, California

- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$7.00/kg**, expected operational start date 2030 onward, origin: Mexico
- **PLATTS RENEWABLE HYDROGEN:** Renewable-derived "green" hydrogen indicative offer at **$5–$6/kg**, 30/mt per day, fuel cell grade pure hydrogen, 500 bar pressure, solar and behind the meter renewables, Southern California
- **PLATTS LOW-CARBON HYDROGEN:** Biomass gasification-derived hydrogen indicated transaction value at **$4.50/kg** in the US, above 12 mt/day facility, going into Southern California, excluding IRA subsidies, carbon credits bundled

© 2026 TUBE ENERGY INC.

- **PLATTS LOW-CARBON HYDROGEN:** Biomass gasification-derived hydrogen indicated cost at **$1.91/kg** in the US, above 12 mt/day facility, excluding IRA subsidies and carbon credits

Subsidized Hydrogen Pricing (Excluded from Comparative Analysis)

- **PLATTS RENEWABLE HYDROGEN:** Renewable "green" hydrogen indicated value **$3/kg** in US Gulf Coast, 40 tons/day, including IRA 45V credits
- **PLATTS RENEWABLE HYDROGEN:** Behind the meter renewable "green" hydrogen indicated offer **$3–$4/kg** in US Gulf Coast, plant gate or delivered within 30 miles via pipeline, 40 tons/day, including IRA 45V credits
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** USGC Indicative value at **$3/kg** renewable-based "green" hydrogen, at the gate/facility, with dedicated renewables, including IRA 45V tax credits, Source: Developer
- **PLATTS HYDROGEN:** Hydrogen indicative value at **$36/kg**, public pump, Port of Oakland, California, Class 8 Fuel Cell Trucks, fuel origin: North Las Vegas via liquid hydrogen [Heard April 1]
- **PLATTS HYDROGEN:** 5 Iwatani California refueling stations heard selling at **$29.99/kg**

International Pricing

- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Indian refinery tenders renewable hydrogen willingness to pay at **$2.5/kg**, Volume: 5,000 mt per annum, Tenure: 25 years
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Indian refinery tenders renewable hydrogen indicative offer at **$4.5–5/kg**, Volume: 5,000 mt per annum, Tenure: 25 years
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Indian refinery tenders renewable hydrogen indicative offer at **$6/kg**, Volume: 5,000 mt per annum, Tenure: 25 years
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$3.00–4.00/kg**, expected operational start date 2030 onward, origin: Colombia
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$6/kg**, expected operational start date 2030 onward, origin: Colombia

- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$3.50/kg**, expected operational start date 2030 onward, origin: Colombia
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost preliminary estimated at **$9/kg** for a pilot project in the refining sector in Colombia
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Indicative willingness to pay value (WTP) for renewable-derived hydrogen estimated at **$2.4–3.0/kg** for the refining sector in Colombia
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$4.00/kg**, expected operational start date 2030 onward, origin: Colombia

© 2026 TUBE ENERGY INC.

- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$3.80–6.00/kg**, expected operational start date 2030 onward, origin: Colombia
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$3.50–5.00/kg**, expected operational start date 2030 onward, origin: Mexico
- **PLATTS RENEWABLE-DERIVED HYDROGEN:** Renewable-derived hydrogen indicative production cost at **$7.50/kg**, origin: Colombia

Additional Market Data

- **PLATTS HYDROGEN:** Indicative maintenance costs at **$0.20–1.00/kg**, transit sector in California, short term contract with onsite, industrial gas production
- **PLATTS HYDROGEN:** Liquid hydrogen indicative bid below **$7/kg**, at the facility, Lancaster California, 10-year contract
- **PLATTS LOW-CARBON HYDROGEN:** Low-carbon liquid hydrogen indicative target value at **$5–7/kg** at the pump, transit agency, California, 2030
- **PLATTS RENEWABLE HYDROGEN:** "Green" hydrogen indicative production value at **$4–$12/kg** (in terms of oil equivalent: $200–$600/barrel), 2025, region/location not specified, Source: Saudi Aramco CEO
- **PLATTS RENEWABLE HYDROGEN:** Renewable-derived "green" hydrogen indicative value below **$10/kg**, below 30/mt per day, fuel cell grade pure hydrogen, up to 500 bar pressure, utilizing renewable electricity, Los Angeles, California, operational date 2028 [Heard April 1]
- **PLATTS LOW-CARBON HYDROGEN:** Indicative willingness to pay value (WTP) at **$5–6/kg**, dispensed hydrogen at refueling station, heavy-duty trucking and transit, California [Heard 3/28/2025]
- **PLATTS HYDROGEN:** Indicative value above **$1.00/kg**, delivered SMR-derived hydrogen, pipeline, end use: fertilizers, contract base 20–30 years, 200 MMSCFD (millions of standard cubic feet per day) 472,800 kg/day, USGC
- **PLATTS HYDROGEN:** Indicative value above **$1.00/kg**, delivered SMR-derived hydrogen via pipeline, end use: fertilizers and refinery, USGC

- **PLATTS LOW-CARBON HYDROGEN:** Indicative values for renewable-derived hydrogen in the range of **$10–$19/kg**, California, at the facility gate, excluding IRA 45V credits
